Abstract (en)  
[origin: WO2012126661A1] The invention is based on a tool clamping device (10), in particular an oscillating tool clamping device, comprising a clamping unit (12), which has at least one clamping element (14) for securely clamping a working tool (16) in an axial direction (18) and at least one clamping head (20), which is arranged on the clamping element (14) and is intended for clamping the working tool (16) at a free end (30) of the clamping unit (12). It is proposed that the clamping unit (12) has a guiding unit (22), which is intended for guiding at least one movement of the working tool (16) along at least one direction of movement (34), which deviates significantly from the axial direction (18), in at least one operating state.
