Abstract (en)

[origin: WO2012126026A2] The invention relates to a device (1) for spanning an expansion joint (2) in a roadway, in particular in the transition region to bridges, comprising a mat-shaped intermediate profiled element (5) having a length l, wherein the intermediate profiled element (5) is divided over the length l into several partial profiled elements (24) extending in the longitudinal direction of the intermediate profiled element (5), the individual partial profiled elements (24) being connected to each other and forming a watertight connection.
