Abstract (en)

[origin: WO2012123248A2] In a facility for checking large-volume goods, in particular freight goods, with an X-ray source (1), which emits X-rays for irradiating the goods, and with a detector arrangement aligned with the X-ray source, the detectors (4, 5) of the detector arrangement are designed or arranged in such a way that detector rows (3, 6, 7) are produced with two row limbs which abut one another at right angles on their longitudinal sides, of which one limb is aligned parallel to the movement direction (9) of the goods being checked, and the other is aligned perpendicular to this in the direction of the X-ray source (1).
