Abstract (en)

[origin: EP2687118A2] The apparatus (1) has arms (2, 3) equipped with flat heating surfaces and configured to form a grip to allow the heating surfaces to thermally treat hair in a concomitant manner. A comb (9) is assembled in a slide connection (11) with one of the arms in a direction of longitudinal axis (X) of the arm. The arm includes a locking system (15) configured to be actuated in a stop position in which the locking system blocks the comb on the arm in an assembled position or to be actuated in a retracted position in which the locking system authorizes the sliding motion of the comb on the arm.
