Abstract (en)
[origin: EP2687270A1] The present invention relates to a device to obtain positional control. This device is applicable to a support movable on a platform and is characterised in that the support has an angular constitution with the lower horizontal section which moves guided on the platform and which has, on its lower part, a protrusion which selectively fits into aligned openings provided in the platform, the indicated horizontal section comprising two pins, a front pin and another rear pin, having play in respective slots of the guide, the rear pin being coupled in a vertical slot provided in said horizontal section of the support.
