Abstract (en)

[origin: EP2687447A1] The device (1') has a conveying device (10) for an article such as beverage container, and a fan (18) for creation of contraction medium (19) such as hot air. A heating coil (20) is arranged for controlling the temperature of the contraction medium, and a division device is arranged for division of the contraction medium into two sub-streams. A set of heating units or nozzle surface (15) is arranged, where one of the heating unit is arranged for heating the conveying device. The division device comprises a control unit for automated control of division of the medium into two sub-streams. An independent claim is also included for a method for adjusting different operating modes of a contraction device.
