Abstract (en)

The method involves guiding belt-shaped material (2) in a container treatment machine (1) over several rollers (3) and a drive roller (4). The drive roller is controlled in service mode by exercising a manual force signal to the belt-shaped material. A start signal and/or a stop signal for the drive roller is triggered by the manual force signal. The slow operation is executed by the drive roller due to the manual force signal. The stop signal for the drive roller is triggered by the timing signal, position signal and/or acoustic signal. An independent claim is included for a container treatment machine.

Abstract (de)

Verfahren zum Transport eines bandförmigen Materials (2) in einer Behälterbehandlungsmaschine (1), insbesondere eines Etikettenbandes in einer Etikettiermaschine, wobei das bandförmige Material (2) in der Behälterbehandlungsmaschine (1) über eine Vielzahl von Rollen (3) und mindestens eine Antriebsrolle (4) geführt wird, dadurch gekennzeichnet, dass die Antriebsrolle (4) in einem Wartungsmodus durch die Ausübung eines manuellen Kraftsignals auf das bandförmige Material gesteuert wird.
