Abstract (en)

[origin: EP2687657A2] The lock has a separate component (1) including a lock support. A transferring element e.g. transmission rod and rope of Bowden cable, is indirectly connected with a lever arm of a lock pawl (4) after assembling the separate component. The separate component with supporting wall regions (6, 8) engages body-fixed counter supporting wall regions (7, 9) in installation position. The separate component is directly or indirectly connected with one of the counter supporting wall regions by a fastening element in a region of one of the supporting walls in the installation position.
