Abstract (en)
The invention relates to a lock (4), e.g. for a vehicle door (1), comprising a lock (4) which is preferably protected by a metal enclosure (7) and is connected mechanically, e.g. via pull-rods (5, 6), to an exterior opening handle provided with a lock cylinder (8), and via for example a wire (13) to an interior opening handle with blocking control. The invention is achieved by a latching means (18) being adapted to moving into engagement with a locking arm (16) which is situated in the lock (4) and by which the locking function of the lock (4) is latched or unlocked.
