Abstract (en)

[origin: EP2687797A1] The container (1) has a holding chamber for receiving goods. A cooling chamber (26) is provided with a cooling device for cooling air. A heating chamber (25) is provided with a heating device for heating air. A ventilation device circulates the air in the container. The holding, cooling and heating chambers are connected with each of other chambers through apertures (36, 46a, 46b) and/or an air duct. The ventilation device produces airflow in the container, where the airflow flows through the holding chamber, the heating chamber and the cooling chamber in series. An independent claim is also included for a method the operating a transport and storage container.
