Abstract (en)
[origin: EP2688047A1] The apparatus has a mobile pressing module (2) including a pressing unit (21) to press a slightly flattened object to an active propelled circulating conveyer belt. The belt is arranged in an upper part of the apparatus and a lower part of the module. The object is transported between the belt and the module. A recess for a flexible, bellows-shaped, spring-shock mounted air bag (210) is provided in an upper part (201) of a housing (20) of the module. The bag is projected through the recess, where the bag together with holding and air supply devices is fastened to the upper part of the housing.
