Abstract (en)

[origin: EP2688056A1] The application concerns the ecological information carrier (1) with the gravitational unfolding mechanism (3), which comprises elastic display walls joined with edges, while the unfolding mechanism (3) is fastened between the edges connecting the display walls, and is also equipped with the fixed length element and the variable length element, characterised in that the gravitational unfolding mechanism is provided with the gravitational expander connected with the variable length element through hinged side expanders and the blocking elements which block the gravitational expander.
