Abstract (en)  
[origin: EP2688085A1] The device (1) has a contact lever retaining unit (10) for retaining a movable contact lever (2) during switching-on process. The unit has a holding part (12) and a rigid coupling part (13). An active connection unit is arranged between a switching handle (5) and the coupling part for bringing the coupling and holding parts to a releasing position during movement of the handle. An elastic returning unit (4) i.e. pressure spring, is supported at the holding part such that the holding part is elastically loaded towards a holding position in which the lever lies at the holding part.
