Abstract (en)

[origin: WO2012126748A1] The invention relates to an electronic circuit arrangement (102) with a substrate (106) and a module (108) to be received in an insert housing (104). An electronic circuit arrangement (102) according to the invention comprises at least one spring element (116, 118) in addition to the substrate (106) and the electronic module (108) that is held by the substrate (106). The circuit arrangement (102) is provided for inserting into a housing (104). The module (108) thermally contacts a housing region (110, 136) in order to dissipate heat after the insertion, and the contact is made via the at least one spring element (116, 118). The circuit arrangement also comprises at least one spacer (126, 128) on the module or on the housing (108) in order to prevent damage during the insertion of the circuit arrangement (102) into the housing (104).
