Abstract (en)

[origin: EP2689924A1] The device has a hub with a bore complementary to the outer contour of the drive shaft. The bore has two inwardly inclined grooves, and the hub is provided with an external thread at its one end, so that a clamping device in the form of a screw-mountable clamping jaw is fixed in the grooves for fastening the rotary tool or the tool holder to the drive shaft. The clamping jaw has two clamping claws, which are attached to a common ring at one end. An independent claim is included for a sheet-like material processing module with counter tools.
