Abstract (en)
[origin: EP2690026A1] The present invention relates to a container comprising a base, a first pair of opposed walls and a second pair of opposed walls defining the fillable space of the container, a pair of stacking members which are movable between a stacking position in which the stacking members are positioned to support the base of another container stacked thereon and a filling position in which the stacking members are substantially removed from the fillable space of the container, and means for moving the stacking members between the stacking position and the filling position, substantially along the mouth of the container. The invention also relates to a stacking member for use with said container.
