Abstract (en)

[origin: EP2690369A1] The safety element (10) has a holder (20) which forms a bearing surface (22) or a contact surface for a mounting head or an eccentric. A detent (30) is provided to come into contact on the upper side of a flap. The holder and the detent are brought into operative connection with each other by a connecting unit (50). The connecting unit is able to change the distance between the holder and the detent. The holder or detent is made from zinc-die casting, a stamped-bent part, plastic or composite material.
