Abstract (en)
[origin: EP2690382A1] The capacitor (1) has a tube-fin block (2) which is arranged with the collection tubes (5). The tubes (3) of the tube-fin block are passed through the openings (6) of the collection tube to engage the tube-fin block with the collection tube for fluid communication. A collector (7) is arranged in parallel with one of the collection tube, and connected with the collection tube through the overflow openings, such that thermal separation is provided between the collector and the collection tube.
