Abstract (en)

A cooling device comprising a heat insulated body (12); a door (10) hinged to the body (12); a dispenser (2) adapted to an inner wall (100) of the door (10), having an inner tank (20) having a dispense opening (204) and an outer tank (21) having a valve opening (210), disposed one within the other; and a valve member (3). It comprises an air channel (200) provided between a lateral wall (203) of the inner tank (20) and a lateral wall (211) of the outer tank (21) in a manner to provide that the water filling inside of the outer tank (21) through the dispense opening (204) of the inner tank (20) takes place of air inside the outer tank (21) by movement of air to the outside of the outer tank (21).
