Abstract (en)

A subsea transformer comprising a first transformer part (10) and a second transformer part (20) is provided. The first transformer part includes a first core segment (11) and a first transformer winding (12). The first transformer winding is supported by an elongated core member (15) of the first core segment. The second transformer part includes a second core segment (21). A second transformer winding (22) is arranged around a hollow cylindrical space which is formed so that the first transformer winding can be inserted into the hollow cylindrical space for enabling a substantially coaxial arrangement of the first and second transformer windings.
