Abstract (en)
[origin: EP2690704A1] According to embodiments described in the specification, a method and mobile electronic device are provided for tuning an antenna. The mobile electronic device comprises an electrical ground member (30) supporting at least one antenna (150); a housing containing the electrical ground member (300) and having a conductive ring (108) defining the perimeter of the housing; and a conductive tuning member (304) disposed between the conductive ring (108) and the electrical ground member (300), for transforming an impedance between the electrical ground member (300) and the conductive ring (108); wherein the conductive tuning member (304) is connected to the conductive ring (108) by a first short (308), and to the electrical ground member (300) by a second short (312).
