Abstract (en)  
[origin: EP2690716A1] The element has a base body comprising a connection section and a socket section (12). The socket section comprises a contact arm (28) for contacting a plug contact. An additional spring (16) encloses the body in an area of the socket section and acts together with the arm in the contact area such that the spring is deflected against resetting force of an additional spring arm (34). The spring has a guiding latch (24) in an area of an insertion opening (26) for the contact. The guiding section overlaps with an end area of the arm and outwardly preloads the arm. The base body and/or the spring is designed as a press-bent-part.
