Abstract (en)

[origin: EP2690719A1] The device (3) has a set of half-shells (1), where each half-shell is arranged with a guiding unit (4) for guiding a cable e.g. electric cable. The set of half-shells is held against each other by a strap ring (6) surrounding the guiding unit. The set of half-shells is arranged with a set of clamping legs (7) that is adapted to be hung on a set of projections of a clip of a connector. The set of half-shells is centered on a set of edges (14) and is axially inserted inside the connector, where the edges limit distance of one half-shell with regard to another half-shell on insertion. An independent claim is also included for a connection assembly.
