Abstract (en)

[origin: WO2012130910A1] The present invention relates to an apparatus for the pressure-zone-regulated cleaning of surfaces with a scraper, a pressure-exerting device and a sensing device, wherein the scraper can be pressed onto the surface by means of a plurality of contact-pressure means in a sub-region of the pressure-exerting device and the sensing device senses the actual contact pressure of the scraper on the surface, characterized in that the contact pressure of the pressure-exerting device is regulated in order to generate a predetermined contact-pressure profile over the length on the surface of the scraper.
