Abstract (en)
[origin: WO2012130267A1] The invention is based on a hybrid motor vehicle device, having at least one starting element (10a) which is provided for connecting an internal combustion engine (11a) to a transmission unit (12a), having at least one electric motor (13a) which is provided for connecting to the transmission unit (12a), and having an operating medium pressure system (14a; 14b; 14c) which is provided for at least cooling the electric motor (13a) and the starting element (10a) and which has at least one cooling duct (15a; 15b; 15c) which, in at least one operating state, connects the starting element (10a) and the electric motor (13a) to one another in terms of flow. It is proposed that the operating medium pressure system (14a; 14b; 14c) has at least one adjustment unit (16a; 16b; 16c) which is provided for varying a flow cross section of the cooling duct (15a; 15b; 15c).
