Abstract (en)
[origin: EP2692624A1] A multi-purpose floatable container includes a casing (10), a cap (21), at least one linkage disc (30) and at least one buckling bolt (40). The casing (10) has four corners (133) and each corner has a linking groove (134), an upper hole (135), an upper enlarged hole (1351), and a lower hole (136). The at least one linkage disc (30) is partially and respectively inserted into at least one of the linking grooves (134). Each linkage disc (30) has four connecting orifices (32) longitudinally defined through the linkage disc (30). Each buckling bolt (40) is inserted into a top hole (221) of one of the corners (133), the upper hole (135), the connecting orifice (32), and the lower hole (136) for fixing the cap (21) on the casing (10). Multiple containers can also be assembled to form a floating platform for diversified purposes.
