Abstract (en)  
Skin packaging machine comprising a sealing member (1) that acts on a product (4) wrapped by a lower film (2) and an upper film (3), and which seals or closes the films (2, 3) to each other around the product (4) in order to vacuum-package said product (4) between both films (2, 3), and control means for causing the sealing member (1) to move in order to package the product (4). The sealing member (1) defines at least one inner space where the product (4) to be vacuum-packaged is disposed wrapped at least partially by the two films (2, 3), and comprises at least one longitudinal first wall, a longitudinal second wall and a transverse wall between which the inner space is defined, and an opening facing the transverse wall.
