Abstract (en)
An improved plastic floor tile assembly structure (10), which includes a rectangular floor tile body, the first two adjacent sides of the floor body having a male buckle formation (20) and the second two adjacent sides having a female buckle body formation (30), a buckling slot is provided in between the inner side wall (21, 31) of the male buckle and the female buckle, and the inner side wall of the floor body, said inner side wall of the male and female buckle is slanted in a direction away from the inner side wall of the floor body, and the inner side wall of the floor body having an adhesive layer (40), with this structural characteristics the floor assembly between two floor bodies becomes more simple and convenient, it not only provides the more robust assembly, but also eliminate uneven assembly surface, and at the same time, improve the aesthetic appearance of the assembly.
