Abstract (en)  
[origin: EP2693213A1] An object of the present invention is to provide an immunochromatographic detection method comprising a step of detecting the failure to add a specimen and an immunochromatographic test strip comprising a means for detecting the failure to add a specimen. The inventors provides an immunochromatographic detection method and an immunochromatographic test strip capable of detecting the failure to add a specimen through a step and a means using an antibody solid-phased on an insoluble membrane for capturing the complex of a component (control component) contained in the specimen other than the analyte and a label to which an antibody to the component is immobilized so as to detect the presence or absence of the control component, in an immunochromatographic detection method of detecting an analyte in a sample acquired by diluting the specimen.
