Abstract (en)

A method, apparatus, and program product suitable for use in the travel industry utilize a dynamic and hierarchical generic data mapping model (28) to facilitate the publication of traveler profile data from a source system (12), such as a profile management system, to a plurality of downstream target systems (14). A generic data mapping model may be utilized to dynamically build a target-specific publication data mapping (22), e.g., in association with the publication of a traveler profile (18), such that the traveler profile may be transformed into a target format using the dynamically built publication data mapping.
