Abstract (en)

[origin: WO2012136491A1] The invention relates to a rotary conveyor device and to a method for conveying articles (400) from the tobacco-processing industry. The rotary conveyor device comprises a body (110) having a substantially cylindrical casing (120), wherein the casing (120) comprises a plurality of vacuum pockets (121), to which a vacuum can be applied for suctioning the articles (400). The invention is characterized in that a film (200) can be detachably fastened to the casing (120) by means of fastening means (310), wherein the film (200) is designed to convey the articles (400) on the side of the film facing away from the casing (120).
