Abstract (en)
[origin: WO2012136480A1] The invention relates to a surgical clip comprising two clip segments, which each consist of a (beam-shaped) clamping section preferably extending in a linear manner and an actuating section, and further comprising a flexible spring assembly, by means of which the two clip segments are integrally coupled to each other. According to the invention, the flexible spring assembly is arranged and shaped such that it bulges between the clip segments along the actuating sections toward the clamping sections. The flexible spring assembly is composed of a number of series-coupled individual spring arms.
