Abstract (en)  
[origin: WO2012137179A1] A head fixation system comprises a platform, a fixation ring rotatably coupled to a ring mount extending from an upper surface of the platform, wherein the fixation ring includes a plurality of slots extending around a circumference thereof, a head support structured for insertion into a first one of the slots in the fixation ring, a first fixation post having a first fixation pin for engagement with a patient's skull, wherein the first fixation post is structured for insertion into a second one of the slots in the fixation ring, a second fixation post having a second fixation pin for engagement with the patient's skull, wherein the second fixation post is structured for insertion into a third one of the slots in the fixation ring, and an MRI coil including a top coil member and a bottom coil member removably mounted to the platform, wherein the MRI coil is rotatable relative to and independent of the fixation ring.
