Abstract (en)
[origin: WO2012137005A1] vehicle lift (10) is provided comprising a platform (12) attachable vehicle (14). Auxiliary equipment such as a safety gate (16) is mountable on the platform 12. bracket (26) on the platform (14) receives the lower end of the gate (16), IA latch (38) is engageable between the lower end of the gate (16) and the bracket (26) and can be moved between engaged and disengaged positions. A biasing device (48) biases the latch (38) into the engaged position. A foot-operated release lever (40) is operable to overcome the biasing device (48) and move the latch from the engaged to the disengaged position. The latch (38) holds the gate (16) securely and is foot-operated, thereby leaving an operator's hands free to hold and control movement of the gate (16).
