Abstract (en)
[origin: WO2012136230A1] A closure (10) for a container that has an interior where a product may be stored and that has an opening to the container interior, said closure (10) comprising a base (100), that base (100) comprising a skirt (120) for extending from said container at said opening, a base deck (160), and a spout (180) projection upwardly from said base deck (160) to define a discharge aperture (182), wherein said base deck (160) has an at least partly curved outer or upper plane, said outer or upper plane and/or an edge (150) between the skirt (120) and the base deck (160) having, at its periphery, at least two elevation regions and at least two depression regions extending between said at least two elevation regions. The invention further refers to a container with such a closure.
