Abstract (en)

[origin: WO2012130766A1] The invention relates to an abutment device, in particular for installing floor elements, comprising a first abutment element having a first abutment surface and a second abutment surface, which is oriented transversely to the first abutment surface, and a second abutment element having a third abutment surface, which is oriented transversely to the first abutment surface, said second abutment element being guided in a slidingly displaceable manner on the first abutment element, wherein a distance between the first abutment surface and the third abutment surface can be set such as to be fixed, wherein on a side opposite the first abutment surface the first abutment element comprises a recess, which is delimited by an edge and in which the second abutment element is arranged.
