Abstract (en)  
[origin: WO2012138322A1] The present invention is directed to Anti-ballistic Chairs with the preferred embodiment consisting of a conventionally appearing stacking chair with padded scat cushion and back rest, having a tubular framework with arm rests, having the addition of a skirt section below the seat extending to the floor level. The core of the chair will consist of layers of flexible anti-bail istic fabric, also known as soft armor, wrapped in two directions around the tubular members of the back rest, seat and skirt section. Alternatively, the stacking chair will be constructed of pre-manufactured hard anti-ballistic armor components, also known as hard armor. Two additional embodiments will be folding chairs with tubular frameworks, the first having hard armor anti-ballistic surfaces and the second being able to have hard armor or soft armor anti-ballistic surfaces.
