Abstract (en)

[origin: WO2012136690A1] The invention relates to a method for producing a resistance heating element and to a resistance heating element (10), wherein the resistance heating element has a tubular shape, wherein the resistance heating element is formed in one piece, wherein the resistance heating element is made of silicon carbide, comprising at least the following steps: forming a one-piece molded body from a powder of a sintered material, wherein the powder is pressed; tempering the pressed molded body; pyrolyzing the material of the molded body; and sintering the molded body, wherein the molded body is formed into the resistance heating element.
