Abstract (en)
[origin: US2012255200A1] The upper structure for a shoe includes an upper body formed of stretchable material and covering at least the tiptoe of the foot of a shoe wearer. The structure further includes a toe pressing member located at a position corresponding to toes of the foot, surrounded by the upper body, and formed of non-stretchable material. The toe pressing member presses the toes of the foot from above when the toes of the foot come into contact with the backside of the upper body at the time of dorsal flexion of the foot.
