Abstract (en)

The invention relates to a drawbar (1) for handling waste containers, including a housing (2) that can be coupled to a vehicle and an attachment means for coupling to an element of a mechanism for operating the container doors, the attachment means including at least one assembly (4) provided with two coupling members (6) that move linearly and axially by means of a piston unit, one of the coupling members (6) being attached to the piston unit (7), and the other, opposite coupling member (6) being attached to the liner of the piston unit (7), each coupling member having a grooved portion into which the element of the mechanism associated with the container is inserted, each coupling member (6) including a retaining means that actuate when the element of the mechanism associated with the container is placed in the grooved portion.
