Abstract (en)

[origin: EP2695996A1] The device (10) has a box-shaped container (20) comprising an aperture and a folding bottom (40) at an underside (24) for closing the aperture. The folding bottom is inwardly pivoted to open into the container. An outwardly opened flip cover (50) is provided at a top side (26) of the container. The folding bottom and the flip cover are coupled with each other. An extending coupling bar is provided for coupling of the folding bottom and the flip cover inside the container. The coupling bar is linked at the flip cover and at the folding bottom. An independent claim is also included for a method for removal of a sample of a filling.
