Abstract (en)  
The turbomachine has a housing (1) radially surrounding a flow channel (6), and a sealing or lining element (11) placed between the flow channel and the housing. A clamping ring (14) is arranged partially and circumferentially around the flow channel to abut a contact surface of the sealing or lining element. The clamping ring surrounds the flow channel as a closed ring. The clamping ring includes an outer ring (16) and an inner ring (15) that is spaced at distance from the outer ring along radial direction, where the clamping ring is set between the outer ring and the inner ring.

Abstract (de)  
Die vorliegende Erfindung betrifft eine Strömungsmaschine mit einem Strömungskanal (6) und einem Gehäuse (1,2), welches den Strömungskanal radial umgibt, wobei zwischen Strömungskanal und Gehäuse mindestens ein Abdicht- oder Auskleidungselement (11) angeordnet ist, wobei mindestens ein Klemmring (14) vorgesehen ist, der umlaufend um den Strömungskanal angeordnet ist und gegen mindestens eine Anpressfläche (22) des mindestens einen Abdicht- oder Auskleidungselement (11) anliegend angeordnet ist.
