Abstract (en)
[origin: EP2696146A1] A remote controller (5) capable of notifying whether or not the operation content of an indoor unit (11) and settings on a remote controller are consistent. An air-conditioning remote controller (5) for transmitting a control command to an indoor unit (11) includes a transmitting and receiving unit (83) that receives an operation content of the indoor unit (11), a control unit (81) that compares the operation content of the indoor unit (11) with a setting on the air-conditioning remote controller (5), and a display unit (85) that displays display content based on a comparison result obtained by the control unit (81). The control unit (81) causes the display unit (85) to give notification of presence of an inconsistency between the operation content of the indoor unit (11) and the setting on the air-conditioning remote controller (5) and at least one of the cause of the inconsistency and a method for making the operation and the setting consistent if inconsistency is present between the operation and the setting in a special operation mode in which the indoor unit 11 performs determination and performs operation. A indoor unit (11) for receiving a control command from an air-conditioning remote controller (5). An air-conditioning system (1) comprising the air-conditioning remote controller (5) and an air conditioning apparatus including an indoor unit (11) and an outdoor unit (15).
