Abstract (en)
[origin: EP2696441A2] A connector includes a plug connector and a receptacle connector, which is provided with a receptacle contact fixed to a receptacle insulator. The receptacle contact includes a fixed portion, a first resilient deformable portion extending from an end of the fixed portion, and a second resilient deformable portion extending toward the fixed portion from an end of the first resilient deformable portion. The second resilient deformable portion includes a first contact protrusion which contacts the plug-side contact portion when a plug insulator and the receptacle insulator are connected, a deformation limit portion which contacts the contacted portion when the plug-side contact portion and the first contact protrusion contact with each other, and a second contact protrusion which contacts the plug-side contact portion when the plug insulator and the receptacle insulator are connected.
