Abstract (en)

[origin: EP2511088A1] The method involves forming an outer layer that accommodates bar-shaped smoking articles and holds a package together. A printed or plain foil strip (3) is embossed and/or provided with creasing breaks in a process cycle (P) of a packaging machine (7), where the foil strip is suitable for the outer layer. The strip is cut, and the resulting blank (19) is folded around the articles in the packaging machine. The outer layer is made of a light material e.g. paper, thin cardboard, hybrid foils, multi-layer coated foils of different materials or paper- and plastic foils or metal foil. An independent claim is also included for a device for producing a package for rod-shaped smoking articles.
