Abstract (en)

[origin: WO2012140323A1] The invention relates to a method for observing incidents in an end part area of a pulp dryer, especially in connection with tail threading or web break. In the method at least one machine vision unit is arranged in connection with the first end part of the pulp dryer, and it is directed toward the inner part of the pulp dryer. The machine vision unit is used to monitor incidents in the end part area of the pulp dryer, and deliver monitoring data obtained from the machine vision unit to outside the pulp dryer. The invention also relates to a pulp dryer and use of a monitoring member.
