Abstract (en)
[origin: WO2012139901A1] The invention relates to a method for producing a continuous module for a paper machine covering, in particular press felt, comprising the following steps: a) a support layer (10) is produced, b) a plurality of first stabilisation threads (14) extending essentially parallel to each other in the longitudinal direction (LT) of the support layer (10) are fixed to the support layer (10) by stitch bonding, c) a plurality of second stabilisation threads (15) extending essentially parallel to each other essentially transverse to the longitudinal direction (LT) of the support layer (10) are fixed to the support layer (10) by stitch bonding, d) a support layer (10) onto which the stabilisation threads (14, 15) are fixed in a continuous configuration is arranged such that the longitudinal end areas (24, 26) of the support layer (10) are adjacent or overlap each other, and e) the adjacent or/and overlapping longitudinal end areas (24, 26) are joined together to produce a continuous structure layer (22).
