Abstract (en)

[origin: WO2012140066A1] The invention relates to a concept for a sealing ring (100a) having an electrode (110a) which is configured to form a high voltage plasma with a first counter electrode (110b), which is attached to an opposite sealing ring (100b), in a first interspace between the electrodes (110a, 110b) and to form a high voltage plasma with a second counter electrode (110c), which is attached to the opposite sealing ring segment (100b), in a second interspace between the electrodes (110a, 110c).
