Abstract (en)  
[origin: WO2012140146A1] The invention relates to a lighting device, which has a rod-shaped substrate body (1) having at least one first and one second mounting side (11, 12) and a main extension direction (99), first semiconductor light-emitting elements (31) on first mounting surfaces (21) of the first mounting side (11), and second semiconductor light-emitting elements (32) on second mounting surfaces (22) of the second mounting side (12), wherein the first and the second mounting sides (11, 12) face away from each other, wherein the mounting surfaces (21, 22) are formed by recesses in the mounting sides (11, 12) spaced in the main extension direction (99) and wherein the first semiconductor light-emitting elements (31) are identical to each other and the second semiconductor light-emitting elements (32) are identical to each other.
