Abstract (en)
[origin: EP2698482A2] The system has a soft insulation mat (3) attached on a wall (1) by an attachment element (2), and a plaster base (4) held spaced from the wall, where plaster layers (5, 6) are attached to the insulation mat. The attachment element fixes the soft insulation mat through a spacer sleeve (9) resting against the wall, where the minimum thickness of the spacer sleeve corresponds to that of a plate anchor of the insulation mat. The plaster base is connected to the plate anchor of the insulation mat by a cover part (20). An independent claim is also included for a method for insulating a wall i.e. external wall.
